# Community GHG Survey Los Altos Environmental Commission

### What is Driving a GHG Emissions Inventory?

- o AB-32, California's Global Warming Solutions Act of 2006
  - "Ensure rigorous and consistent accounting of emissions"
- o Specific Targets defined in AB32 reduce statewide GHG emissions to . . .
  - 2000 levels by 2010
  - 1990 levels by 2020
  - 80% below 1990 by 2050

AB32 Scoping Plan Recommends 15% Reduction from Current by 2020

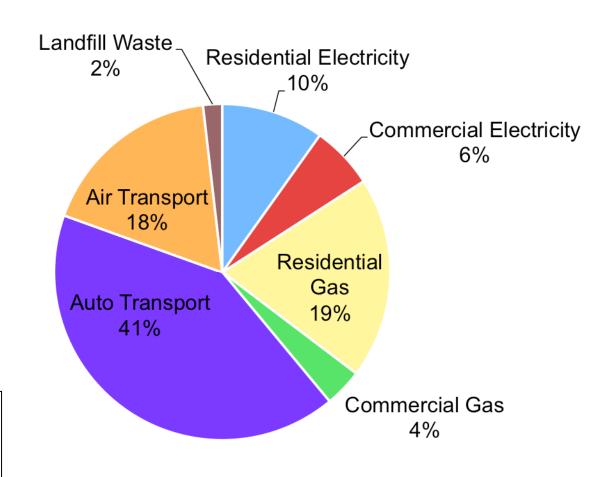

o Many cities are now engaged in GHG inventory activity
Palo Alto, Menlo Park, Santa Clara, Santa Cruz, Woodside, San Carlos
South San Francisco, Daly City, Monte Sereno, Cupertino, Mountain View,
Redwood City, Brisbane, San Bruno, Saratoga, Hillsborough, Foster City,
Los Gatos, Half Moon Bay, Los Altos, Campbell, Milpitas, etc.

#### **ICLEI's Recommended Process**

Leadership Commitment We are here Milestone 1 Inventory Emissions Milestone 2 Establish Target Milestone 5 Milestone 3 Monitor/Evaluate Develop Climate Action Plan Progress Milestone 4 Implement Climate Action Plan

Figure 1.1 The Five-Milestone Process

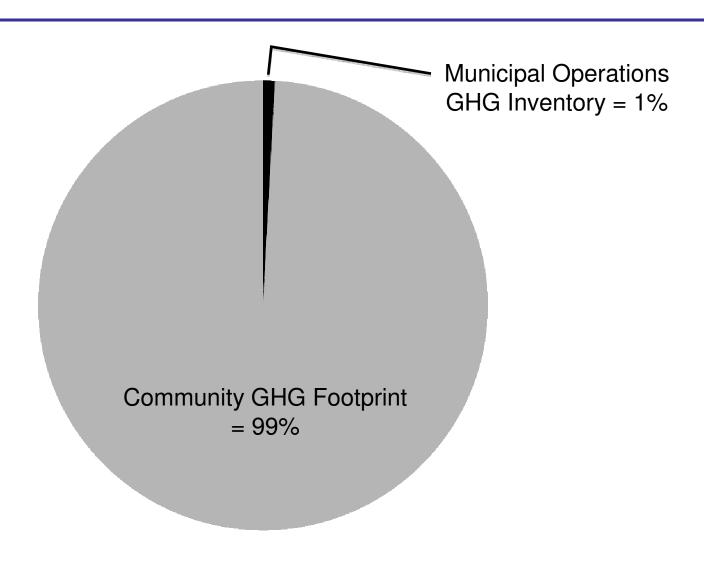

### Los Altos Community GHG Inventory – Milestone #1 ICLEI Method Milestone #1

Los Altos 2005 Community Emissions 209,440 tonnes CO2e

NOTE: Preliminary analysis of Los Altos energy use, travel estimates

# **Community GHG Footprint Dwarfs Municipal Operations Footprint**

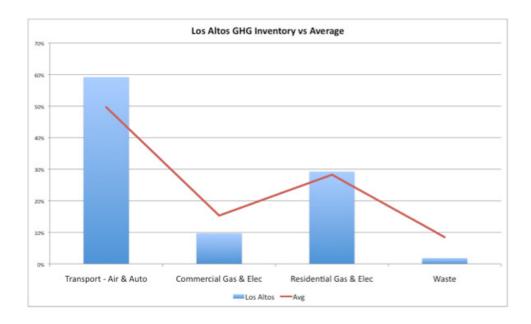

## How confident are we in the current inventory?

- 1. ICLEI methodology is widely used and accepted.
- 2. High confidence levels in > 80% of data
- Confidence Level

  High

  Medium
  Lowest

3. Comparison with other municipal inventories passes the "reasonableness test."

# **Overall Conclusions**

- This represents Los Altos Community GHG inventory as accurately as possible with today's available information sources
- By far the biggest opportunity for GHG reduction is in the Community, not in municipal operations
- We are about in the middle of the pack with regard to progress on Climate Action initiatives

# Recommendation

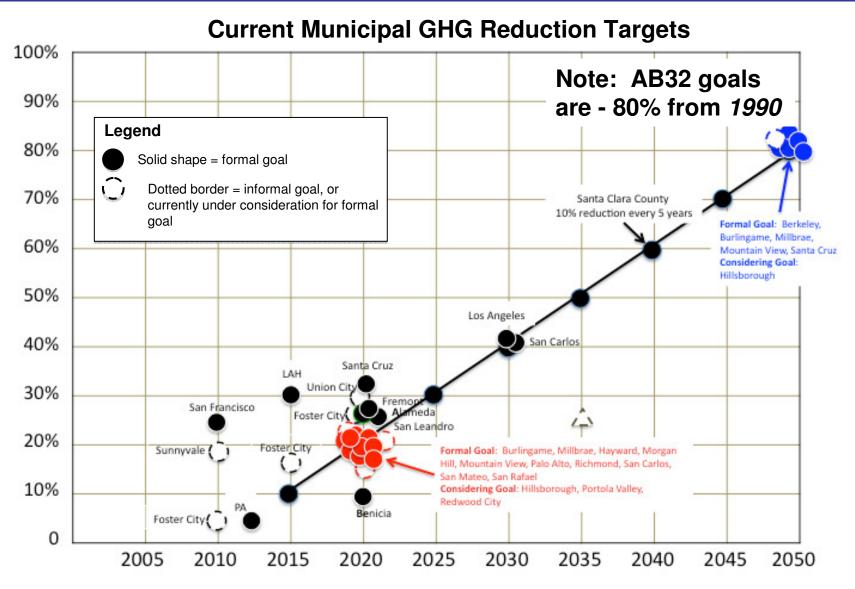

That the LA City Council formally adopt this as Los Altos Community GHG baseline.

#### **ICLEI's Recommended Process**

Leadership Commitment Our next Step Milestone 1 Inventory Emissions Milestone 2 Establish Target Milestone 3 Milestone 5 Monitor/Evaluate Develop Climate Action Plan Progress Milestone 4 Implement Climate Action Plan

Figure 1.1 The Five-Milestone Process

# Milestone #2: Establishing a target – what have other cities done?

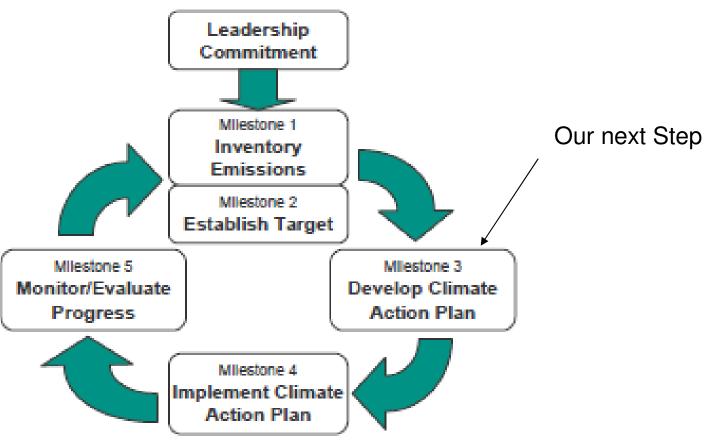

Source: Joint Venture: Silicon Valley Network

# Recommendation

That the LA City Council task the EC and staff to recommend non-binding GHG reduction targets for both Los Altos municipal operations and the Los Altos community.

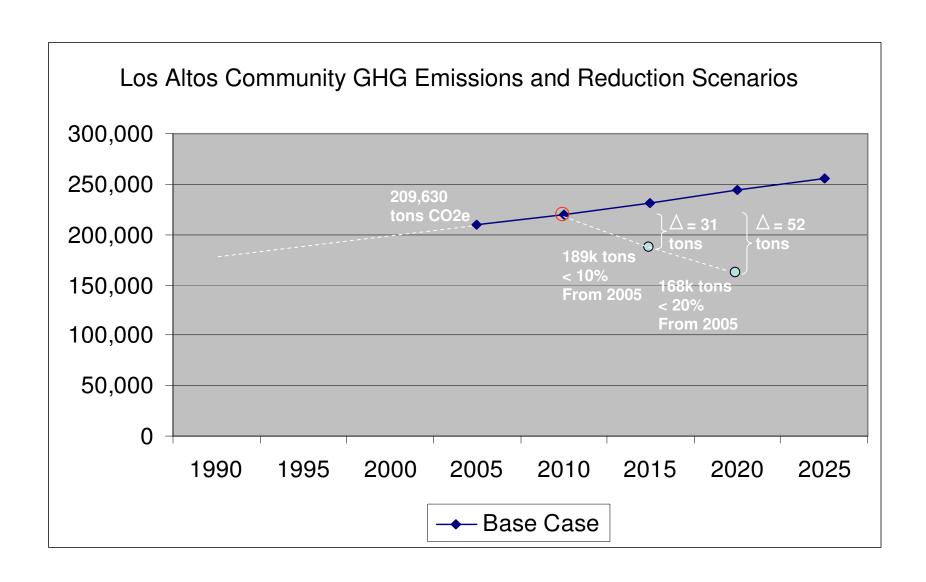

#### **ICLEI's Recommended Process**

Figure 1.1 The Five-Milestone Process

12

# **GHG Reduction Scenarios (draft)**

# Climate action Plan: What does it take?

Basic Los Altos Hills	More Complex Palo Alto: a book
Residential Electricity  Home Audits & Educational Programs	Full Chapters on
□Continued promotion of Residential Solar PV	□Utility Programs
☐Greening of Grid Electricity by PG&E☐Availability of Green Energy option by 2012	□Sustainable Purchasing
Natural Gas	☐Transportation and Land Use
☐Home Audits & Educational Programs	□Green Building
Commercial Gas & Electric:  Outreach to Foothill College, etc.	□Zero Waste
Residential Solid Waste:  □Switch to Green Waste 10	□Education Strategies

# Recommendation

That the LA City Council task the EC and staff to develop a Climate Action Plan for both Los Altos municipal operations and the Los Altos community.

# Summary of recommendations

- That the LA City Council formally adopt this as Los Altos Community GHG baseline.
- That the LA City Council task the EC and staff to recommend non-binding GHG reduction targets for both Los Altos municipal operations and the Los Altos community.
- That the LA City Council task the EC and staff to develop a Climate Action Plan for both Los Altos municipal operations and the Los Altos community.

# Backup Slides

### **How are GHG Inventories Calculated?**

Table 2.3 Inventoried Emission Sources by Scope<sup>8</sup>

	cittorica Elilission dodrocs by	
Scope 1	Scope 2	Scope 3
Fuel consumed to heat/cool all	Purchased electricity consumed	Solid waste generated by
facilities	by facilities	government operations
Fuel consumed for vehicles and	Purchased electricity consumed	Fuel consumed for employee
mobile equipment	by electric vehicles	vehicles used for commuting
Fuel consumed to generate	Purchased steam for heating or	
electricity	cooling facilities	
Leaked refrigerants from facilities		
and vehicles		
Leaked/deployed fire suppressants		
Wastewater decomposition and		
treatment		
Solid waste in government landfills		

# Some GHG Conversion Factors . . . not all kWh's are Equal!

Table 1.2.1. Common Energy Sources and CO<sub>2</sub> Emissions Impacts

Common fuels/Power sources	Measure	CO <sub>2</sub> emissions (lbs.)
Grid electricity/NPCC New England*	1 kWh	0.91
Grid electricity/SERC South*	1 kWh	1.49
Grid electricity/WECC Rockies*	1 kWh	2.04
Grid electricity/WECC California*	1 kWh	0.88
Motor gasoline**	1 gallon	19.38
Diesel fuel No. 1 & No. 2**	1 gallon	22.33
Jet fuel (Jet A or A-1)**	1 gallon	21.05
Propane**	1 gallon	12.63
Natural gas†	1 therm	11.67

### **Los Altos Community Inventory Approach**

- Community inventory generally less detailed and time consuming than municipal inventory
- Different cities have put varying levels of effort into auto/air estimates;
   standard estimates exist based on population numbers
  - LAH used estimates
  - PA used data from survey results conducted by PA 'GRCC'
- o Key data points for community inventory
  - electricity and gas use obtained information from PG&E
  - solid waste
  - auto transportation
  - other
- Develop initial community inventory using standard ICLEI approach and 'cook book'
- o After initial inventory is complete, EC will present the findings, and seek possible community input on more detailed transportation numbers for a future update, date TBD.

# **Data on Community Energy Use, 2005 - 2008**

Los Altos Residential and Comme	2005-2008			
	<u>2005</u>	<u>2006</u>	<u>2007</u>	<u>2008</u>
Commercial Electricity, KwH	56,594,701	58,657,196	60,946,008	60,605,314
Residential Electricity, KwH	92,370,758	94,498,691	93,768,034	94,953,068
Commercial Gas, THM	1,392,592	1,414,741	1,468,634	1,458,772
Residential Gas, THM	7,386,122	7,458,906	7,507,876	7,581,962
